1 TerenceLau's Jupyter files

1.1 Why I do this

I usually write the files on Jupyter. However, the ipynb cannot show on the website, so, I use Jupytersite to convert .ipynb to HTML, Markdown, LaTeX and PDF.

JupyterSite allows you to easily build a suite of rendered documents from Jupyter notebooks. Jupyter notebooks go in, html/markdown pages, PDFs, slideshows, and tex comes out. If you use this in a Github repository, it will even build a Github pages site. This also shows how to make the notebooks easily accessible in Julia.

Here is the link of the origin repo:

1.2 My Files

1.2.1 HTML

- Use Python in Calculus

- Use Python in Linear Algebra

- Use Python in Advanced Statstics

1.2.2 Markdown

- https://github.com/TerenceLiu98/JupyterSite/tree/master/Markdown

1.2.3 Slides

- https://terenceliu98.github.io/JupyterSite/
